

ECONOMICS-HUMAN HEALTH JOINT MAJOR

An innovative, new interdisciplinary major designed to equip students with the skills to understand, evaluate, and analyze healthcare systems and health policy

PREPARING STUDENTS FOR A VARIETY OF HEALTH-RELATED CAREERS

This 45-credit hour course of study combines empirical methods, economic reasoning, bioethics, and the human experience of health in an effort to understand how humans interact with the health care system and the promotion of public health within communities.

Students will have the foundation to pursue a range of professions, including:

- Health policy analysis
- Health care consulting
- Health care administration and management
- Health care informatics

The Economics-Human Health joint major is a great option for pre-health, especially Emory pre-med students, to add breadth of knowledge to their medical education. It also provides a strong foundation for students interested in law school or the pursuit of an MPH degree.
